

## 'EARLY PREVENTION OF GENDER-BASED CYBERVIOLENCE FOR YOUNG PEOPLE IN CONFLICT WITH THE LAW IN JUVENILE JUSTICE SYSTEMS'

According to the European Institute for Gender Equality, one in ten girls has suffered some form of cyberviolence by the age of 15. The #PreventGBV project works for the early prevention of gender-based violence among young people in the juvenile justice systems of Spain, Finland, Italy, Portugal and Romania.

## Objectives

- Understand how young people in conflict with the law experience gender-based cyberviolence.
- Improve the digital skills of young people to identify, prevent and react to gender-based cyberviolence.
- Increase young people's commitment to and participation in raising awareness regarding these issues.
- Develop knowledge and skills on gender-based cyberviolence prevention among professionals working with young people in juvenile justice systems.
- Raise awareness of the communities and families of young people in conflict with the law regarding gender-based cyberviolence.
- Produce knowledge, share good practices and promote networking among key stakeholders.

# Outputs

- The project develops training and awareness-raising materials to prevent gender-based cyberviolence among young people.
- The target groups are professionals who work with young people in conflict with the law. The project provides materials for the implementation of workshops on gender-based cyberviolence prevention.
- Available in English, Spanish, Finnish, Italian, Portuguese and Romanian.
